

Cleargreen™

Phthalate-Free PVC Tubing
by Conewango

For our customers who are looking for ways to incorporate materials designed with a commitment towards environmental responsibility, we offer our complete line of ClearGreen environmentally friendly PVC tubing.

Most PVC tubing sold today contains Phthalate additives such as DEHP. Phthalates are known to present increased health and environmental risks. Our ClearGreen Line of tubing has been formulated to address the growing trend away from this type of plasticizer.

Consider using ClearGreen where you are currently using Phthalate plasticized PVC. It has superior clarity, biocompatibility, and is friendlier to the environment at time of disposal.

SUPERIOR QUALITY
SMALLER FOOTPRINT

Cleargreen™
