

Conewango

Serving the Dairyman since 1931

Now Available

Conewango Products Delivers
Quality, Reliability, and
Consistent Performance

MR-T3 and MR-T4 Triangular Replacement Liners to fit the Milk-Rite Impulse shell.

- ▲ Triangular replacement to fit the Impulse style plastic shells.
- ▲ MR-T3 available in our time tested Conewango natural rubber formulation for superior milking performance in terms of slippage and milk-out with standard service life.
- ▲ MR-T4 available in our proprietary Conewango rubber formulation for extended service life.
- ▲ Available in vented or non-vented versions. Regardless of vent location, vented liners can move milk away from the teat end more quickly for faster milking, better flow rates, and drier teats. All liner vents release residual vacuum at the teat during unit detachment. Conewango vents are located in the milk tube to move dirty air away from the teat end.
- ▲ Guaranteed to outperform your existing brand or your money back.
